

Major upgrade with simple update

We believe in being ready for the future – and here's the proof: If you own or operate OJ Air2 AHU controllers dating from mid-2014 or later, you can now give them a simple software update to make them cloud compatible.

With cloud access comes many benefits such as easier troubleshooting and remote support. To start your upgrade, all you need to do is send an email.

You can find more about how to enable Cloud on your existing OJ Air2 controller [here](#).

If you want to get started right away, read on: Simply take a readout of the MAC addresses on all the devices you want to update. Email them to the supplier who sold you your OJ Air2 controllers. You will then receive a key file that unlocks your controllers' hidden cloud capabilities.
